

## Main Process Plant Building (MPPB) Controlled Deconstruction Update

Week of February 27, 2023

### Deconstruction – Main Plant Process Building Monorail

The Department of Energy's West Valley Demonstration Project (WVDP) in New York completed removal of the Extraction Cell monorail crane; finished the remaining portions of Extraction Cell #3 on the south side of the MPPB; and continued with the controlled deconstruction of the Chemical Process Cell (CPC) west wall by removing the first three (3) feet of wall of the 5-foot thick wall.

The west side of the Main Plant Process Building after removing the first three feet of the 5-foot thick concrete wall of the Chemical Process Cell.

An operator uses an excavator with a shear attachment to remove the Extraction Cell monorail crane from the Main Plant.
